

Clinical decision support software for dosing insulin in the hospital.

EndoTool® Glucose Management System
is owned and developed by Monarch Medical Technologies

about

Monarch Medical Technologies is the leading provider of clinical decision support software for inpatient glucose management and the emerging leader as the world's safest prescriptive drug dosing platform. With over 60 combined algorithms developed by a team of practicing doctors and mathematicians, Monarch's EndoTool® Glucose Management System ensures that dosing is individualized and responsive to ongoing changes in each patient's unique physiological response. As a Class II FDA-approved, patent pending software suite, EndoTool allows hospitals and care providers to dose insulin safely by replacing antiquated and dangerous linear, point-to-point, or sliding scale formulas. This technology is doing more than changing the conversation in over 180 hospitals— it's helping providers achieve the coveted Triple Aim of better health, better care, at a lower cost.
